INFORMATION

Application Download Site: https://marketplace.microfocus.com/appdelivery/content/web-tours-sample-application

Application URL: http://localhost:1080/WebTours

The application utilizes a wealth of page object types, and several pages. Some of its features are login and logout, registration, flight selection and flight booking, and flight itinerary viewing and cancellation.

Point of clarification - I have developed the scripts after defining a set of manual test case definitions. I will use 3 scripts I will call Sanity, Regression, and acceptance scripts.

This time I generated the page object values using the Robotcorder SCAN function. This function generates page object values for all the objects on a window being displayed in the app.

NOTE: I have not mentioned this before. I don't download Microsoft product files because not everyone has licenses for their office products. So, you should have a snipping tool. Use that to get snapshots of displays in my videos to save and use.
